The diagnosis and treatment of childhood nephropathies have been changing as well as the epidemiological aspects of these diseases during the past ten years. Between 1964 and 1979 the most common renal diseases in childhood were the glomerulopathies (v.v.) in 5.6% of all diagnoses of renal diseases in childhood and the nephritis, nephrosis and pyelonephritis in 10.3%. Glomerulopathies in childhood are less frequent nowadays (2.3%). In the past 5-10 years, the principal changes in treatment are the increased use of immunosuppressive therapy (6.9% of all diagnoses in children) and the earlier introduction of dialysis in patients with irreversible kidney failure (11.5%). The overall survival for childhood nephropath
